AIM: To install and configure Flutter environment

Theory: Flutter is Google's portable UI toolkit for crafting beautiful, natively compiled applications for mobile, desktop, and web from a single codebase.

Flutter enables developers to write a single codebase that can be used to ~~test~~ target multiple platforms including Android, iOS, web & design.

Flutter apps are natively compiled, which means they can achieve high performance levels on both Android & iOS devices.

Steps to install and configure flutter environment

Step 1: Download Flutter SDK

- Visit the official flutter website "<https://flutter.dev>" and click on "Get started" Button

- ~~Button~~ Choose your operating system

Step 2: Extract the flutter SDK:

- After downloading extracting the folder to your preferred location.

On Linux you can edit your shell profile file (add the following line:

```
export PATH=$PATH:pwd/flutter/bin
```

On windows you can add a system environment

5. Verify flutter installation

Open a new terminal window and run the following command to verify that flutter is correctly installed

flutter doctor

Step 5: Install Required Dependencies -

Based on the output of flutter doctor you may install additional dependencies.

Step 6: Set up an Emulator

If you're developing for mobile, you can set up emulator or use a physical device

Step 7 create a Flutter Project.

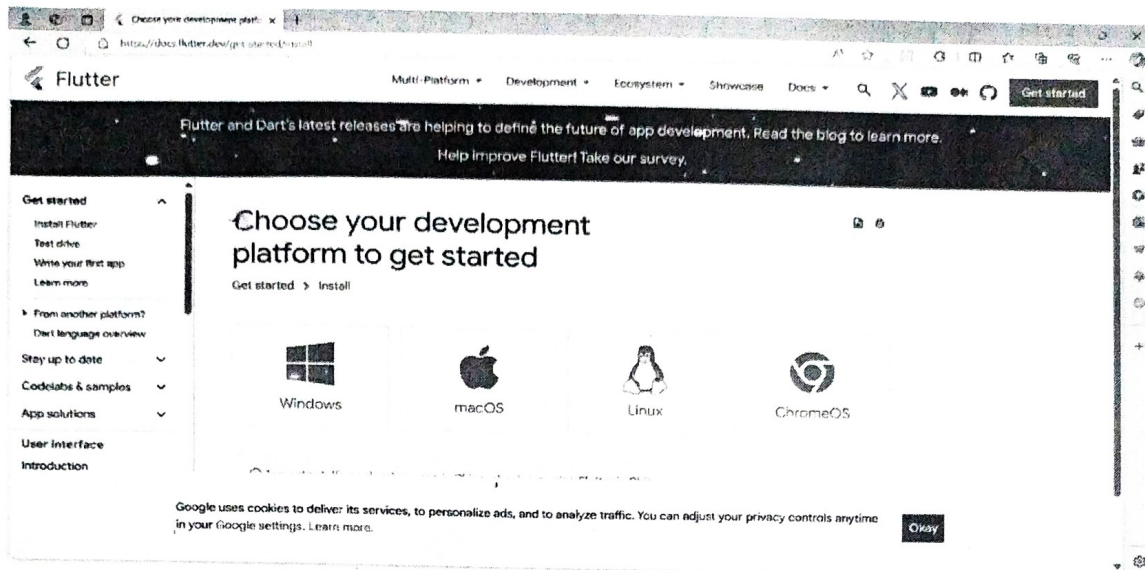

- flutter create my-flutter-app

Step 8 Run Your Flutter App

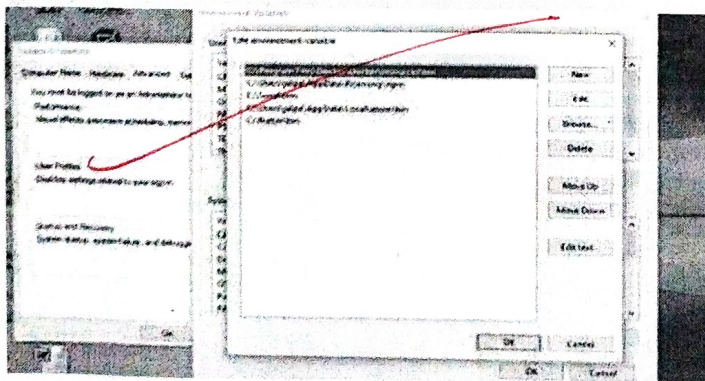

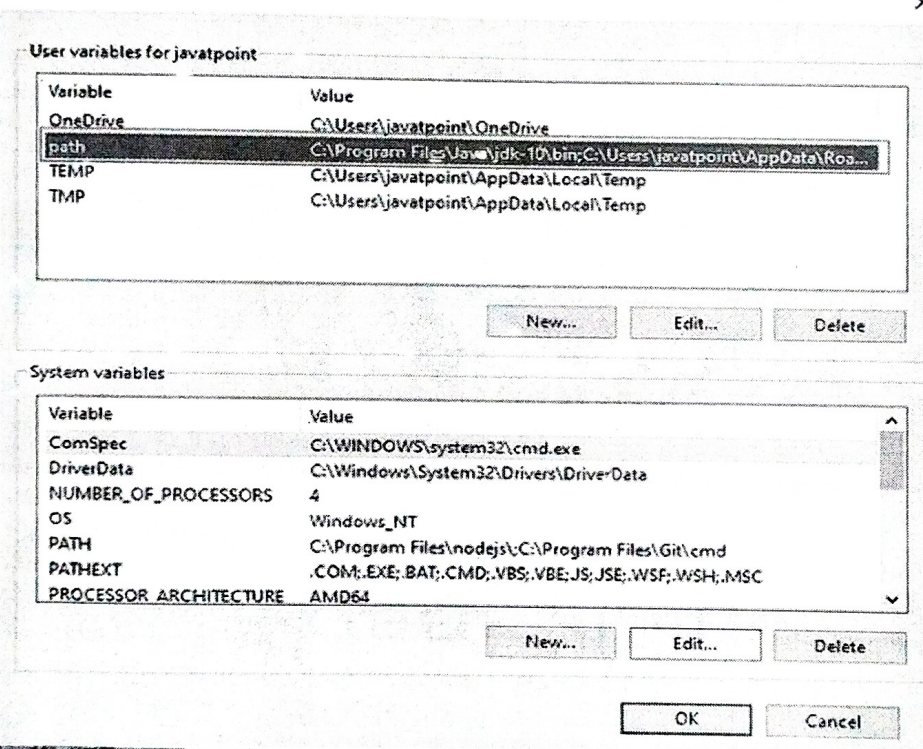

- 'cd my-flutter-app'
- 'flutter run'

conclusion:- Successfully done the installation and configure Flutter Environment.
