

Experiment NO 3

Date of performance

Date of submission

Aim: To design a layout of flutter app using layout widgets.

Theory:

In flutter everything is a widget - even layout models are widgets.

1) Row and columns:

A row widget is used to arrange its child widgets in horizontal line. It is typically used to create a row of buttons or icons.

The column widget arranges its children vertically in a single column.

2) Expanded:

An expanded widget makes a child of row, column or Flex expand to fill the available space along the main axis.

3) container:

container first surrounds the child with padding present and then applies additional constraints to the padded extent.

4) List View

List view is the only most commonly used scrolling widget. It displays its children one after another in the scroll direction. In the cross axis, the children are required to fill the list view.

main.dart x pubspec.yaml

```
1 import 'package:flutter/material.dart';
2 import 'dart:ui' as ui;
3 void main() {
4   runApp(const MyApp());
5 }
6 class MyApp extends StatelessWidget {
7   const MyApp({Key? key}) : super(key: key);
8   @override
9   Widget build(BuildContext context) {
10    return MaterialApp(
11      title: 'Welcome to Flutter',
12      home: Scaffold(
13        appBar: AppBar(
14          title: const Text('Welcome to Flutter'),
15        ),
16        body: Center(
17          child: Image.asset('lib/asset/comp.jpg'),
18        ),
19      ), // Scaffold
20    ); // MaterialApp
21  }
```
